NO. 17 Lancaster, Pa., Saturday, March 7, 1959 $2 Per Year

y Day Set for Mar. 11

ster County's Annual Dairy Day program will 1 at 9 30 a.m., Wednesday by J. Rohrer Witmer, ceremonies for the annual event, according to mith, chairman of the Dairy Day Committee.

wing opening ceremonies, announcements and ons, a quartet of speakers, including three Penn ialists, will be heard.

Horne, PSU agri- ngineer, will speak ting and Wafering

Parkin, PSU dairy will discuss "Wa- ewage Disposal."

muel Guss, PSU specialist, will pre- topic of "Dairy Mastitis - Ring

ing the morning Richard J. Spiers, ries president, will "Dairy Outlook — Situation."

ternoon session will Parkin returning lk on "Dumping at 1:30 p.m.

p m., Smith will a panel discussion Comfort - Breed- ing - Herd Replace-

members will be

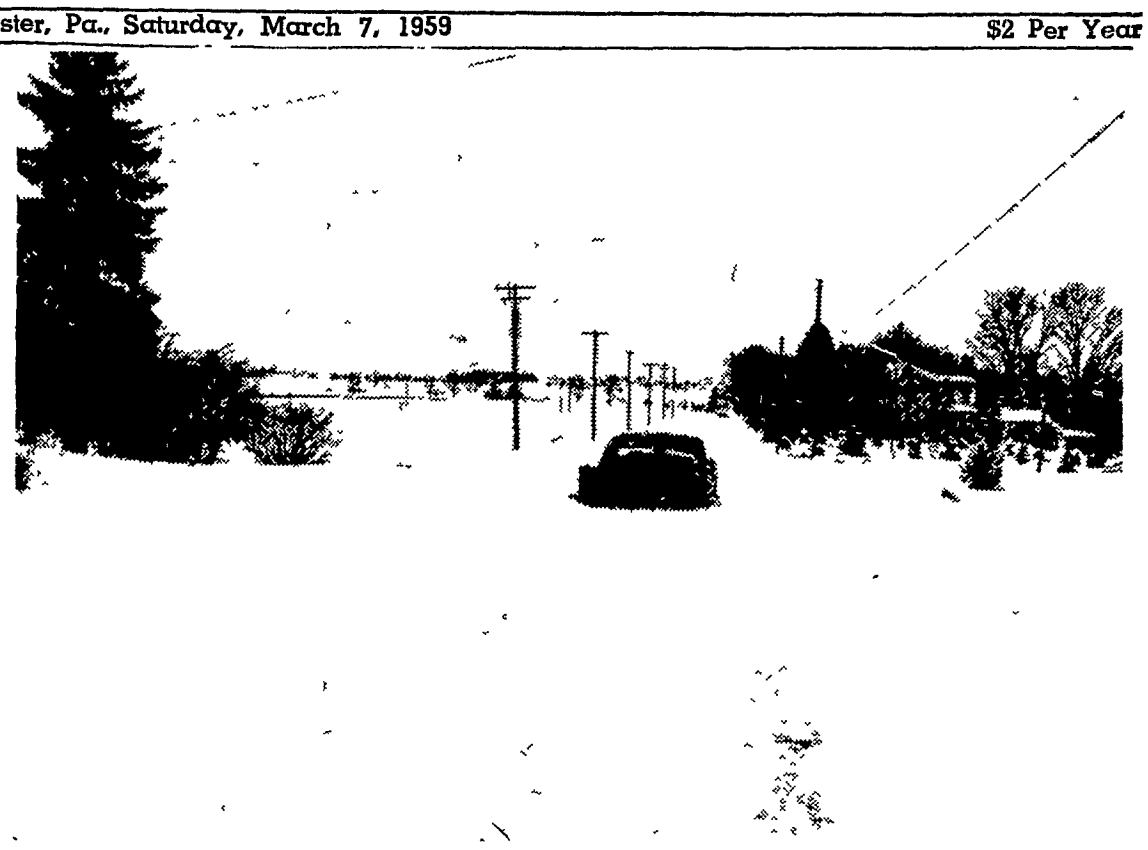
Mrs Raymond Witmer, Harold Book, Ivan G. Martin and John Metzler.

Smith reported an all-day display of water softner and conditioner equipment will be on exhibit, also dumping station outfits.

Lunch will be available at the Pavilion for $1 per person.

Dairy Day is conducted by the Extension Service in cooperation with the Milk Distributors, Milk Marketing Co-ops and Dairy Breed Associations.

Committee members are. Charles E. Cowan, John A. Flora, B. Snavely Garber, S. A. Horton, Robt. Kauffman, Robert Keen, Aaron Landis, Alan B. Miller, Dr. -T. H. McMurray, John Paes, Melvin R. Stoltzfus, J. Rohrer Witmer and Dr. H. G. Wohnseidler



LATE FEBRUARY, 1958 brought this scene to Lancaster County as one of the heaviest snowfalls in history throttled activity in the region. From the 800-plus travelers stranded in a Turnpike restaurant to countians cooking in their fireplaces, it was an experience to remember in the vagaries of Pennsylvania weather This year Lancaster County had about 1 5 inches of snow during all of February—only 7 2 inches from November 1 to March 1. February's normal snowfall - 7 2 inches. LF PHOTO

Mere 10% of Last Year's Snow Total In County For Entire Winter -- So Far

One year ago this week, Lancaster County and the entire Eastern half of the U. S. was digging out—again—from heavy snowfall. Electric service had been restored. It was again possible to communicate by telephone and a trip to town was again possible. In many cases, inadvisable, but possible.

The 1957-58 winter snowfall total for Lancaster County was a staggeringly 'Artic-like 60 inches. The 1958-59 winter snowfall total to date has been a paltry but appreciated 7.2 inches.

In fact, most Lancaster County farmers are wishing they had some of that 60-in snowfall on their fields, because since May, 1958 precipitation for the county is 5 5 inches below normal for the nine month period.

In addition, much of the precipitation for this winter quickly became runnoff due to solidly frozen ground.

As a result, soil conditions over most of the county are noticeably drier than preferred.

In the plains and mid-west states by contrast, snowfalls have been among the heaviest on record From east central New Mexico, across the Texas Panhandle, over northern Oklahoma and up into the corn belt, snow covered the ground almost constantly

The same condition existed throughout the mid-lands and into northeastern Penna. New York's upstate region and New England.

Heavy snowfall as usual, were the rule for the Sierras and Cascades on the Pacific slope. although the Rockies had some historic low snowfall totals in many spots, coupled with exceptionally frigid temperatures.

Washington Boro, in Lancaster County, is considering return to Manor township after flood borne ice smashed a major portion of that village's real estate.

The eastern Corn Belt flooding particularly along the Wabash, inundated thousands of acres of farmland—along with urban and suburban areas.

But in Lancaster County, December was the coldest month of the winter. Total precipitation was 1 21 inches 1 91 below normal. Snowfall was .7 inches—normal 4 1

November had been 2 5 degrees above normal in tem perature, with a 47 2 average and 1 33 inches above normal precipitation, with a 4.06 total, including a half inch of snow. Normal November snowfall is 1 1 nches.

January was about normal with a 32 degree temperature average. But moisture was 1 39 inches below norm at 1.77, with only 4 5 inches of snow, compared with the norm of 8 3 inches.

February also was drier than normal, with 1.73 inches of total moisture, .88 below norm, with a mere 1.5 inches of snowfall, against the 7.2 inch normal blanket. Temperatures for the month averaged 1 5 degrees above normal at 34.5.

January's low was 12 degrees, February—10; and December 13

m Announced For

ato Growers Institute

Pennsylvania's second largest potato producing Lancaster County is expected to send a large del- o the 8th annual Pennsylvania Potato Growers March 11 and 12 at Potato City Hotel near Coud-

rding to county-by county potato production rec- ng back to 1939, Lancaster in that year was the otato county in the Keystone State.

facts came to light Pennsylvania Crop Service records ailable this week the State Depart- Agriculture to the ania Co-operative Growers Association, of the Potato City

wo-day conference is for full discussion ers of current prob- "below grass roots" t comes at a time rowers will obtain e in making final ons for their 1959

5,000 acres, Lancas- ter County commercial potato growers last year harvested 965,000 hundredweight values at $1,727,300 —based on December 15 prices which averaged about $1.78 per hundred pounds for the county. The average yield per acre was 193 cwt., highest for any county in the state and well above the state average of 175 cwt. an acre. Erie was second in acreage at 5,600 but third in volume, 952,000 hundredweight, averaging 170 bags of 100 pounds each to the acre.

Biggest volume of potatoes harvested in Lancaster Coun during the 1939-58 period was 1,240,000 hundredweight in 1948 when the yield averaged 155 cwt. from 8,000 acres.

Several hundred Pennsylvania potato growers are expected to attend the Potato City Institute, according to Ivan Miller, Corry, President of the association.

Program planning includes top place consideration of the latest innovation in potato culture—twin row vs. triple row planting in comparison with the longstanding single row practice.

Advocates of multiple row planting claim higher yields of U. S. No. 1 tubers which may revolutionize potato production, they say

David Seem of Kutztown will moderate a panel at 10 o'clock Wednesday morning,

Extension Schedules

Tobacco Seed Treating Meetings

A two-day series of seed-treating and disease-control demonstration meetings for county tobacco growers is scheduled for March 12 and 13 by the county Extension Service, in cooperation with Penn State University.

Harry S. Sloat, associate county agent, reports that meetings will be held at the following places and times

MARCH 12—9 a m Witmer J. Rohrer farm, Strasburg RD 1, east of Strasbury.

1.30 p m, farm operated by Chester Sensenich, Lititz RD 3, one mile south of Lititz

March 13—9 a.m., farm of Ernest Lefever, Lancaster RD 2, between Millersville and Central Manor.

1:30 p m., farm operated by John K. Fisher, Mount Joy RD 1, between Mount Joy and Marietta.

To control Wildfire, Sloat reccomends cleaning and treating seed before planting, treating muslin and seedbed boards with formaldehyde solution before planting, sterilizing seedbeds; using bordeaux spray or drench on bed after seeding before covering; watering plants in the morning on sunny days; using regular seedbed spray or dust program; spraying or dusting plants with DDT before planting to control flea beetle, and preventing the tobacco from getting overripe in the field.

Dr. O. D. Burke, Penn State plant disease specialist will treat seed with silver nitrate solution and explain the above practices during the four meetings. One quart of seed will be cleaned and treated for each grower during the meetings

Sloat reports this program will continue as it has for the past seven years, with a small charge for cost of materials.

Each farmer will have to give his seed a final washing at home and then spread it to dry, he added.

At Lancaster Yards

Receipts Climb to 4200

James E. O'Hara,

In Charge, Market News Branch

MARCH 6, 1959
WEEKLY REVIEW—

Week's receipts will total about 4200 head, 1200 more than last week. Trading was moderately active for all classes, but slaughter steers weighing under 1200 lb. and high-choice steers were active with good demand. Bulls were rather scarce this week

Slaughter steers accounted for about 55% of the supply and stockers and feeders 35%. Compared with last week's close slaughter steers were mostly 25-50 higher. Cows were steady to 25 lower with the decline on cutter and better grades. Bulls held steady. Stockers and feeders sold mostly at steady rates.

Bulk of choice slaughter steers weighing under 1300 lb. made 27.75-29, load average to high choice 1239 lb. brought 29.25. Good to low-choice made 25.50-27.75. Few small lots good and choice heifers made 25.50-27.50.

Cutter and utility cows sold for 16.50-20.50 with coml. cows up to 21.50, canners and low cutters made 14.75-16.50. Utility and coml. bulls ranged from 22 75-25.50, and good grade fed bulls sold up to 27.

Good and choice 800-1050 lb. feeder steers brought 27-28.75. Medium and good feeders went at 25-27.25. Good and choice 550-800 lb. stock steers brought 28-30.50, med and good 26-28 25. Good grade stock calves made 29-33.

Vealers declined sharply this week with increased supply. Vealers were about $3 lower The supply of vealers is about 830 head or about 75 head more than last week Trading was moderately active early in the week but trading was slow on Wed. Good and choice vealers brought 29-36, choice and prime commanded 37-39 with a few prime vealers to 42 on Mon. Standard and low-good made 24-28. Utility sold down to 18

Barrows and gilts remained about steady although sows were $1 lower. Trading was moderately active for about 1350 head. U.S. 1-3 grade 190-225 lb. barrows and gilts made 16.50-17.25 with No. 3 grade back down to 16. Hogs more uniform for weight and grade including 1-2 grade 190-215 lbs ranged from 17.50-18.50. 230-250 lb. hogs brought 15.75-16.50. 300-600 lb sows sold for 12-15.

Sheep receipts increased about 190 from last week's 213 head. Trading was active for slaughter lambs.

Guernsey Records Noted by DHIA

Cows in the registered Guernsey herd of Raymond F. and Louise Witmer, Willow Street, have recently completed official production test records under the DHIA program, according to the American Guernsey Cattle Club.

Improvers Queen Bess, a senior four-year-old, produced 10,692 lbs. of milk and 531 lbs. of fat in 268 days.

Penn Del Rex Gloriana, a junior three-year-old, produced 10,529 lbs. of milk and 542 of fat in 305 days.

Penn Del Neros Red Ella, a junior two-year-old, produced 10,373 lbs. of milk and 499 lb. of fat in 305 days.

Selects Patsey Arbutus, a 160 lbs. of milk and 527 lbs. of fat in 252 days.

Penn Del Kings Butterfly, a junior two-year-old, produced 9,153 lbs. of milk and 554 lbs. of fat in 305 days.

All records were established on twice-daily milkings, with tests supervised by Penn State University.

Chicago Cattle Steers Up 25

CHICAGO, Feb. 26—
WEEKLY REVIEW—

CHICAGO, Mar. 5—
WEEKLY REVIEW—

CATTLE— Supplies about 10% larger than last week and the corresponding year-ago week, largest in five weeks though still moderate. Percentage slaughter steers in receipt increased and a smaller percentage heifers and cows. Nearly 75% of arrivals slaughter steers compared 70% last week, 15% heifers and 7 or 8% cows. Smaller percentage choice and prime steers than last week, only about prime, smallest for any week since last July and compared with 8.4% prime last week.

Percentage good steers larger than the 25% good last week, Choice steers most numerous though by a smaller margin than last week, average weight of slaughter steers estimated to be about the same as last weeks average of 1178 lbs. Receipts included 65 loads western cattle compared 57 loads last week, bulk of the western contingent again fed steers.

Slaughter steers additionally 25-75 higher following the sharpest price upturn last week since March, heifers mostly 25-50 higher and cows 25-75 higher, canners and cutter cows showing considerably more gain than kinds grading high utility and better. Bulls and vealers mostly steady. Stockers and

(Turn to page 5)

New Holland

All Butcher Classes Gain

Thursday's New Holland Stables' beef market had receipts of 945 cattle and 309 calves Prime and high-choice steers of all weights were full $1 higher. All other classes 25-50 higher. Cows brisk full 50 higher, erasing last week's drop. Calves about steady, instances $1 lower.

Prime butcher steers, lightweight, $30-31.85; choice, $28-29.50; good, 27-28, and plain to medium, 25.50-27.

Choice butcher heifers were $25.50-27; good , $23.50-25.50. and plain to medium $19.50-23.

Good butcher bulls, $24 - 26; heavy bologna bulls, 23-26, and plain to medium, $21.50-24.

Good butcher cows, $20-21.50; med. $19-20; canners and cutters, $16.50-19, and shells, $14-16.

Stockers and feeder steers $24-28.50; stock steer calves $30-32.50.

Choice to prime butcher calves, $39-44; good, $32 -38 light heifer calves (100-115 lbs.) $28-35; med., $28-32, and thin calves were $20-26.

This week's dairy sale had receipts of 128 cows 13 stock bulls and seven heifers, as the market was on the slow side. All cows sold $20-40 per head lower with the bull market steady, however.

Fresh holstein cows brought $325-475; Guernseys. 240 - 300, and other breeds, $250 - 300.

Stock bulls were going at $140-250 and stock heifers from $75-240

The March 2nd horse and mule sale had receipts of 247 head, with the most active market of the spring. Feature of the mule sale was a load of Kansas mu averaged $248 per he ture of the Draft Ho was a team of three steel-gray geldings, for $595.

Draft horse teams $380-595, with sing $170-265. Mule teams ht $350-650, with si $140-230.

Pony mares were 230.

Riding horses wer 370; drivers, $150-25

Killers were abo cents per lb., holding with previous weeks

CALVING FEED

A true Maternity Ration !

* Protection before calving:

1—Helps put the finish and condition on the cow necessary for easy calving and high production

2—Supplies calves with the extra critical nutrients required the last few weeks of pregnancy

3—Helps maintain cow health through proper nutrition at calving time.

* Protection after calving:

1—Less udder congestion means full milk production sooner Feeding these "easy on the cow" ingredients reduces the stress of depending on body reserves

2—More condition is maintained for holding production later in the lactation

3—Try Wirthmore Calving Feed and let the results speak for themselves

New Hybrids For Various Parts of State

New hybrid field corn varieties for Northern, Central and Southeastern Pennsylvania are capable of producing well over 100 bushels of shelled corn per acre. Developed by the Agricultural Experiment Station at the Pennsylvania State University, these hybrids can help local farmers grow more of their own corn for feed. Pa 333, left, was designed for northern tier counties as is Pa 215 that will be available to farmers in 1960. Pa 511, center, is a new hybrid for Central Pennsylvania that will be available for the first time in 1959. Pa 807, right, produces exceptionally well in Southeastern Pennsylvania and is well known for high yield, standability, and drought tolerance. Looking over these all-state varieties are Clarence S. Bryner, Agricultural Extension seed specialist, and George W. Gorsline, Station corn breeder.

-: Lancaster Farming Reviews :-

A new slate of three $200 per annum scholarships has been made available to students or prospective students in the Penn State college of Agriculture. Each grant is potentialiy worth $800 to the recipient. Eligibility is based upon scholastic achievement, high school graduation or its equivalent, citizenship and evidence of need.

The Grand Champoin fat barrow, a 210 lb. Hampshire shown by Millarden Farms, Annville, sold for $47.50 per cwt this week in the first annual Lancaster County Market Hog show and auction. The Grand trio, an entry of Masonic Homes Farm, E-town, totaling 675 lbs., sold for $29 per cwt.

Millarden, Masonic Homes Farm and Stauffer Homestead Farm, East Earl RD1, were the sole members of the show's select championship winners; Millarden taking Reserve Trio and Grand Champion Pen of 10 honors; MHF the Reserve Barrow and Champion Trio titles, and Stauffer—Pen of three Reserve honors.

A total of $8053 84 for an average price of $20 66 per cwt was paid for the 186 hogs shown and sold in the event

A clean sweep of Berkshire classes was registered by H. B. Endslow and Sons, Marietta RD1. Millarden claimed all Hampshire class honors and MHF, the Duroc class tops

Trial Without Jury

How would you like to be tried for a crime in a court without the judge and jury to hear all of the evidence

That, of course, would be extremely unlikely to happen and if it did the verdict would be voided by an appeal court. But it has happened many times in Washington before so-called administrative courts.

Congress over the past 25 years has delegated judicial powers to a number of government administrative agencies and boards without requiring that they observe ordinary court procedures.

The results are forcing Congress to review and reconsider procedures followed by these quasijudicial administrative agencies, such as the ICC, the FTC, the CAA, the SEC and others.

Studies are being made by special subcommittees of the House Judiciary ond Legislative Oversight Committees. Preliminary reports already made strongly suggest the need for legislation to eliminate what one report describes as "fundamental weaknesses" and "flagrant abuses"

Code of Ethics

Eminent lawyers and judges disagree over whether judicia' powers should be delegated to administrative agencies, but they are unanimous in their opinion that if these agencies are to have court powers they must conduct themselves as a court in all respects.

The reports are sharply critical of some of the legislative-administrative - judicial agencies for failure to follow ordinary court procedures and practices when exercising life or death powers over business firms appearing before them.

Some members of these boards and commissions have, in all good faith, felt that their doors should be open for consultation with all parties have an interest in a case before them. It was a way of obtaining all of the informatin they could.

That is a practice that no judge in a court would permit, and it is a practice that has led to resignations resulting from charges of improper influence being exerted on the board members or commissioners

Absentee Decisions

Because of public criticism most of the members of the quasijudicial government agencies have discontinued "out of-court" conferences on cases before them That is a step in the right direction. It would however, be a mistake unless still another step is taken

If members of an agency exercising judicial powers are to bar all contacts and close their minds to all evidence except that presented in official hearings, they should either be present at all hearings or else abstain from voting when the decision is made. Unfortunately they proceed in voting on decisions without having read all of the evidence. This they admit

This is the view held by the United States Court of Appeals for the District of Columbia, which in a decision last year involving the granting of a radio station license held that since one of the Commissioners said he had not read all of the evidence, but had voted any-way, the decision was void and the case should be reheard.

In most cases, however, where the commissioner votes without having read all of the evidence, the injured party usually is afraid to sue because the commission with which he has to live has great punitive powers.

THE BIBLE SPEAKS

International Uniform Sunday School Lessons

BY DR. KENNETH J. FOREMAN

Bible Material: Mark 14:12-42.
Devotional Reading: Hebrews 4:14 through 5:9.

Thy Will Be Done

Lesson for March 8, 1959

A STRANGER to the Christian religion would be struck by two things. One is that the church cherishes much that she does not understand; and the other is that the church loves to remember what the stranger would think we should wish to forget.

Dr. Foreman

The story of Gethsemane is one that every Christian knows. The first three gospels all tell it in some detail. Every communion service begins with the words, "The Lord Jesus, the same night in which he was betrayed . . ." The Gethsemane story is one of anguish of mind and soul, a story of Jesus offering an unanswered prayer—"let this cup pass."

There is no doubt about Jesus' distress in Gethsemane. Matthew, Mark and Luke all testify to it. Mark says that Jesus "began to be greatly distressed and troubled." The word Mark uses which is translated "greatly distressed" in Mark 14:33 is the same word he uses in 9:15 to describe the crowd's astonishment when they saw him after the Transfiguration. It is the same word also in 16:5 and 6, speaking of the amazement of the women at the tomb when they saw the white-robed angel. It is the emphatic form of a word used in Acts 9:6 (King James version) to describe Saul's emotions when stricken to the ground on the Damascus Road. It is a word meaning more than surprise; it is shock. The whole story of Gethsemane holds right up to this word that begins it. Jesus prays in such intensity that sweat poured from his forehead like so much blood. He describes his own feelings as "very sorrowful, even to death." The church does not remember Jesus as a man always serene. One of the early Christian writers speaks of Christ as offering prayers and supplications with strong crying and tears." (Heb 5:7)

"Not What I Will—"

There is a dark side to this. You would think that Jesus was a stranger to the Garden, that if ever there was a time when Jesus felt himself one with his Father's will it was the same, the church would never forget that fact. What better, more edifying, more comforting—would it make Jesus a nobler figure, if we thought of him as at every moment desiring his heavenly Father to do anything different?

No—if the church had been inventing the story, they would probably have invented it the way. But the church is dealing with facts, not fancies. The story of Gethsemane is rather mystified by the fact that we say, "Not what I will, but Thou wilt." Any one who reads it knows exactly what Jesus meant by that, is plain, if we honestly listen, is that there is a difference between what he desired, or would prefer, and his Father in heaven's will that he could say, "Not what I will, but Thou wilt."

Our Lord and Ours

Yet immediately in the next breath, Jesus cries "Not what I will." Jesus was not making a statement giving a legal opinion. Nevertheless that is a profound lesson in prayer that we can learn. We all have memorized the prayer which Jesus taught us and we rattle it off with ease. But every phase of it is honest, and none more so than this: "Thy will be done." It is just fine when we think that what we want, and what we think there in the sky is a Wonderful Fixer, arranging for our every dreams to come true. It is fine too even when we realize that we are not going to let our own will be done, true, provided we can be sure that God has a better plan for us. But what the plan is and what it is, if we become sure of it, it is against our own plan. Prayer is not "fixing things" with God, yet we cannot see God's will about it if our knowledge of God's will is, brings us almost to tears, to amazement. Well . . . then we can pray in dark Gethsemane.

(Based on outlines prepared by the Division of Christian Education, National Council of the Churches of Christ in the U. S. A. Released by Community Press Service.)

Now Is The Time . . .

BY MAX SMITH

Max Smit

TO TOPDRESS WINTER WHEAT—Soil wheat producers who have had very little trouble with the lodging small grains will no doubt benefit from the application of 30 to 40 pounds of nitrogen per acre. This should be about the time growth starts in the spring and will be early to mid-March. Treatment is especially recommended for sandy, shale, or gravel soils where the nitrogen leaches out more rapidly than on fertile soils it is not as valuable. Will cause more lodging trouble

TO BUILD HAY FINISHER—Quality hay is one of the most important farm crops especially for the dairyman; the use of the hay conditioner (crusher or crimper) in the field and a mow finisher in the barn is a splendid combination. The months of March and April are ideal for getting this equipment installed ready for haying time late in May or early June. The feeding value and increase per ton will return a good percentage on the investment in a few years.

TO RECOGNIZE INTERNAL PARASITES IN SHEEP—It is not uncommon to discover stomach worms in young beef steers and in dairy heifers and cows in this area. Animals will not do well with stomach worms and a loss in efficiency will be experienced. The local veterinarian should be consulted for diagnosis and for treatment

TO GIVE EWES SPECIAL CARE—The breeding flock of ewes should have plenty of exercise, laxative feeds and plenty of good legume hay just prior to lambing. If these cares are not provided trouble will appear with "pregnant ewe disease". The addition of molasses to the grain ration will make the feed more laxative.

TO BUY TOP QUALITY SEEDS—The gardening season is approaching and your crop of vegetables will be no better than the kind of seeds planted. Buy good quality seeds from a reliable dealer and in most cases you will get what you expected rather that be disappointed in the end with the wrong variety and perhaps more disease problems.

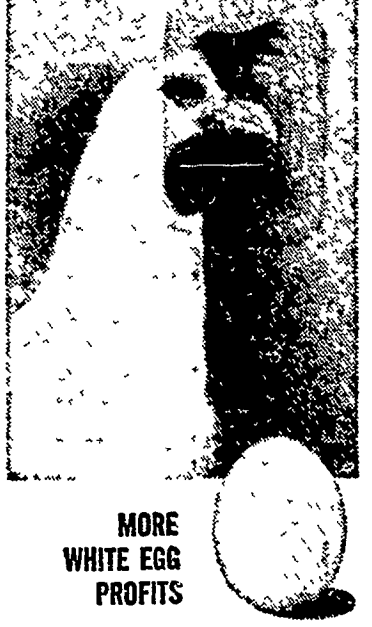
KIMBERCHIK K-137

From Hubbard



MORE WHITE EGG PROFITS

Hubbard's Kimberchik K-137 has proved its outstanding superiority as a white egg producer. Under the most difficult commercial conditions the Hubbard Kimberchik continues to be the poultryman's profitable answer for top quality white eggs. The K-137 produces eggs with an excellent firm albumen content...the kind of eggs the consumer demands...not too large—not too small—but just right. Every trait of the K-137 points to profit. Large egg size early means an early return on your flock investment. High egg average per year means more eggs and more profit. The smaller body size means lower feed costs. You, too, will find the Kimberchik K-137 produced by Hubbard the best all-around bird you ever had. Make your next flock Hubbard Kimberchik and cash in on this top white egg producer.

More Eggs—Better Quality
Better Hatchability

Feed—EARLY BIRD

High Producer Pellets 20B

WITH AUREOMYCIN

HOW TO USE:

COMMERCIAL LAYING FLOCKS 3-5 lb. per day per 100 hea
BREEDER FLOCKS 4-7 lb. per day per 100 hea

(5 lbs. per day per 100 head is equivalent to a continuous feeding program of 40 grm. Aureomycin per ton of feed in a Leghorn flock)

REASONS FOR FEEDING HIGH PRODUCER 20 B PELLETS:

In layer trials on the Early Bird Experimental Farm held in 1957 Aureomycin was found to substantially increase the income per hen.

Many of our leading egg producers, breeders and hatcherymen have used High Producer 20 B pellets for 3 or more seasons and are full of praise for their PERFORMANCE.

Used as recommended High Producer 20 B Pellets will give you SPLENDID RETURN on your investment.

Ph. Lancaster EX 2-2145

Manufacturers of Poultry and Live Stock Feed Since 1875.

Says Edward J. Bowser of Lititz, Pa.:

"$2,000 extra income yearly from my 4,000 layers"

"When we started feeding AUREOMYCIN® to our 4,000 layers 18 months ago, I noticed within a week that we were getting more eggs. The eggs were larger and had a better shell texture.

"Hatchability of the eggs, produced by our breeder stock, has been stepped up by 7% and the regular laying hens have been producing 95.2% AA quality eggs.

"We average 270 dozen eggs a day and have cut feed costs by 1½¢ per dozen eggs by using AUREOMYCIN.

"I estimate that, with AUREOMYCIN, we must be getting an extra 50 cents per hen per year in increased egg sales because of higher quality and production. That gives me an added income of about $2,000 a year."

Get the advantages Mr. Bowser has gotten! Ask your feed manufacturer or feed dealer for layer and breeder feeds containing AUREOMYCIN. American Cyanamid Company, Agricultural Division, New York 20, New York.

Easy Bread Making

by Mrs. Richard C. Spence

In Grandmother's day, the sponge method of bread-making was almost universally used It was a "must" because of the slower acting yeasts. The yeast and liquid were combined with enough flour to make a batter which could drop from the spoon. The batter was covered and left in a warm place to ferment or become bubbly and "spongy". In the morning, the remaining ingredients were added and the breadmaking continued, usually a process taking 'most of the second day!

The difference in the breads made by the sponge method is in the flavor more than anything else. The breads made with water have a "wheatier" taste than usual; those breads made with milk as well as water have a "fuller" flavor.

Following are some receipes for the modern "batter" breads This method is simplicity itself, with the kneading process eliminated. In place of kneading, the batters are beaten.

We're sure you'll appreciate the time saved in the batter method, and know you and your family will enjoy rolls, breads, and coffee cakes made in this way.

Batter Bread

(makes 2 large loaves)
2¾ cups warm water (110 to 115 degrees)
2 packages active dry yeast
6½ cups sifted all-purpose flour
3 tablespoons sugar
1 tablespoon salt
2 tablespoons soft shortening

Pour the warm water into a large mixing bowl. Add the yeast Let stand a few minutes Stir to dissolve. Add about half the flour, the sugar, salt, and shortening. Start the mixer on medium speed, or beat by hand. Beat two minutes or until smooth. Stop mixer.

Add the rest of the flour and stir in by hand until flour disappears, 1 to 1½ minutes Beating in this receipe takes the place of kneading.

Scrape down batter from sides of bowl. Cover bowl with waxed paper Let rise in warm p'ace until doubled —about 30 minutes. Meanwhile, grease two bread loaf pans, 4½x8½x2¾ inches.

Stir down batter by beating hard for ½ minute. This is a thick, somewhat sticky batter. Put into the pans, spreading evenly. Batter will fill pans ½ full.

Let rise in warm place until edges of batter reach tops of pans—20 to 30 minutes. Brush with melted fat, if desired. Bake 40 to 50 minutes (or until well browned on sides and tops) in preheated quick moderate oven (375 degrees). Remove from pans and cool on rack

* * *

Batter Rolls

1½ cups warm water (110 to 115 degrees)
2 packages active dry yeast
4 cups sifted all-purpose flour
¼ cup sugar
1½ teaspoons salt
⅓ cup soft shortening
1 egg

Pour the warm water into a large mixing bowl. Add the yeast. Let stand a few minutes. Stir to dissolve. Add half the flour, the sugar, salt, soft shortening, and egg. Start the mixer on medium speed, or beat by hand, and beat until smooth—1½ to 2 minutes Stop mixer. Add the rest of the flour and stir in by hand until the flour disappears. It will take 1 to 1½ minutes. Scrape down batter from sides of bowl. Cover bowl with waxed paper. Let rise in warm place until doubled — about 30 minutes.

Meanwhile, grease 1½ dozen large muffin cups. Stir batter 20 to 25 strokes. Spoon into the muffin cups, filling ½ full Let rise in warm place until batter reaches top of muffin cups—20 to 30 min.,

Bake 10 to 15 minutes or until well browned on sides and tops, in hot oven, (425 degrees). Remove from pans and cool on racks.

* * *

Batter Coffee Cake

1 cup warm water (110-115 degrees)
2 packages active dry yeast
3½ cups sifted all-purpose flour
⅓ cup sugar
½ teaspoon salt
1 whole egg and 1 egg white (save yolk for topping)
¼ cup soft shortening
Shredded rind of 1 orange or 1 lemon, if desired

Pour warm water into medium sized bowl. Add yeast. Let stand a few minutes. Stir to dissolve. Add about half the flour, the sugar, salt, egg fruit rind and shortening.

Beat two minutes with wooden spoon or with eectric mixer on medium speed. Stop mixer. Stir in the remaining flour a little at a time until it disappears. Scrape down batter from sides of bowl. Cover with waxed paper. Let rise in warm place until doubled—20 to 30 minutes.

Meanwhile prepare topping, and grease two pans nine-inch layer pans, eight or nine inch square pans, one 9x13x2-inch oblong pan. Beat down raised batter with spoon. Grease fingers lightly Press batter evenly into pans Add topping, and let rise in warm place 20 minutes or until doubled. Bake coffee cakes 30 to 40 minutes or until well browned, in quick moderate oven (375 degrees) Remove from pans and cool on racks.

Toppings

ORANGE - SUGAR: Add one tablespoon water to egg yolk. Mix and brush ½ on each coffee cake. Top with mixture of ½ cup sugar and grated rind of one orange

STREULEL: Add one tablespoon water to egg yolk Mix and brush ½ on each coffee cake. Top with a mixture of ½ cup sugar, 2 tablespoons flour, 2 tablespoons butter, ½ teaspoon cinnamon, ½ cup chopped nuts.

FRUIT: Add topping ingredients in the following order, two tablespoons melted butter; ½ cup dried bread crumbs; drained fruit from No. 2 can (1½ to 2 cups) sugar

peaches, cut-up cherries; a mix p cream and the d 5⅓ cup sugar. g flavor throughkes, after applydents with the op of the cakes, ost to the botan Let rise only d for fine tex-

coffee cake afif desired. To dewrapped cake in slow oven (300 degrees) for 30 minutes before serving.

* * *

Batter-Drop Doughnuts

2 packages active dry yeast
½ cup warm water (110-115 degrees)
¾ cup milk, scalded
¼ cup sugar
1 teaspoon salt
½ teaspoon mace
½ teaspoon nutmeg
3½ cups sifted all-purpose flour
2 eggs (room temperature)
⅓ cup soft shortening

Add the yeast to the warm water Let stand. Pour scalded milk over sugar, salt,, & spices in large bowl. Stir until dissolved and slightly cooled.

Add half the sifted flour and beat until smooth. Beat in eggs and yeast-mixture. Blend in the shortening with the remaining flour. Beat until smooth.

Scrape down batter from sides of bowl. Cover and let rise in warm place until doubled. about 30 minutes. Stir down and let rest while fat is heating to 350-375 degrees (to test, a one-inch cube of bread browns in 60 seconds).

Drop batter from teaspoon into hot fat. Turn when edges show color. Frying until golden brown—about 1½ minutes on each side.

* * *

Batter-Whole-Wheat Bread and Rolls

2½ cups warm water (110-115 degrees)
2 packages active dry yeast
2 cups unsifted whole wheat flour
4 cups sifted all-purpose flour
4 tablespoons honey or brown sugar
¼ cup soft shortening
4 teaspoons salt

Pour the warm water into a mixing bowl and add the yeast. Let stand a few minutes Stir to dissolve. Add about half the dry ingredients which have been mixed together, the shortening, and the honey.

Start the mixer on medium speed, or beat by hand. Beat two minutes or until smooth. Beating in this receipe takes the place of kneading. Stop the mixer. Add the rest of the dry ingredients. Blend in with spoon until batter is smooth again, 1 to 1½ minutes.

Scrape down batter from sides of bowl. Cover bowl with waxed paper. Let rise in warm place until doubled —about 30 minutes. Meanwhile, grease two 4½x8½x-2¾ inch, two 9x5x3-inch bread loaf pans, or 24 large muffin cups.

Stir down batter by beating 20 to 25 strokes. This is a thick, somewhat sticky batter Put into the pans. Batter will fill loaf pans or muffin

Contaminated Water Can Effect Your Farm Income

Lancaster, Pa. — Disinfecting water is of utmost importance because the removal of disease producing organisms from water is a prime prerequisite for its safe use.

And chlorination offers the most dependable method of disinfecting water, says the Joint Committee on Rural Sanitation, U. S. Dept. of Health, Education and Welfare.

It is feared that typhoid fever may stage a comeback in the U. S. and that amoebic dysentary, cholera, hookworm and infectious hepatitis, a disease of the liver, threatening human users of untreated well water; while livestock are imperiled by tuberculosis, hog cholera, anthrax, glanders and stomach and intestinal worms.

Crops irrigated by water containing sewage pollution may transmit disease. Waters carrying industrial pollution such as chemical wastes, can damage the crops they irrigate, says U. S. Dept. of Health. The increase in use of supplemental irrigation in the East has raised questions of quality of water. Many natural streams formerly relied on to provide water for livestock have become so polluted that their continued use is unsafe.

Water can be sparkling, clear to the eye, and taste good, yet swarm with these deadly bacteria, nor is merely a deep well the answer.

Only the proper use of chlorination and dechlorination device according to Cliff Lehman, can provide constant and continuous-protection against the menace of water borne diseases.

We will be glad to discuss any water problems you may have at Dairy Day next Wednesday.

For advice about water analysis, contact Cliff Lehman, Water Conditioning Consultant at Century Co., 15 W. Chestnut St, Lancaster, Pa. Phone EX 4-9365.

Soc. 23 Adopts Korean Child

Society #23 met recently with Mrs. John Herr, Jr., 139 Kready Ave., Millersville. Mrs. Edgar Funk, presided, with Mrs. Lois Hostetter in charge of devotions.

The society voted to "adopt" a Korean child, sending funds for his or her support and receiving information about the child. If possible, they will correspond.

Clothing, blankets and sewing material will be gathered for the Child Development Center, and members sewed Cancer pads during the meeting.

Next meeting will be with Mrs. Nelson Hershock.

Society 20 Meets Thursday

Farm womens Society No. 20 met Thursday with Mrs. William Gross, Kirkwood, as Hostess and Mrs. Herbert Mowery, co-hostess.

Mrs. Glenn Ressel presided with Mrs. Jack Ferguson in charge of devotions.

Members voted a contribution to Easter Seals for Crippled Chidren. A St. Patrick's party for March 11 was planned for members' husbands

Mrs Ressel showed slides of her recent trip to the West Coast to complete the program.

Next meeting will be with Mrs. Ferguson at Unionville and will be a luncheon meet.

Johnny on the spot?

Each time you sit down with your schoolbooks, Johnny, America is giving a quizzical and concerned look over your shoulder. For, what teenagers study today will determine whether our country is a leader or follower tomorrow. In this age of electronics, rockets, and atomic energy, set against a critical background of cold war, the world is rapidly becoming an increasingly complicated one. Brilliant, devoted and determined young Americans . . . highly skilled in engineering, physics, chemistry, mathematics and the other sciences as well as logic and economics . . . are desperately needed.

How about you . . . will you be Johnny on the spot?

As you know, here in America you can choose your own subjects. These can be snap courses. Or they can be real courses . . . courses that take hard work and study to complete . . . courses that can help you to make a worthwhile contribution to the progress of the world.

How about you . . . will you be Johnny on the spot?

The opportunity is yours—you have the schools! the teachers and instructors! the laboratories! and all the other facilities you need.

Be Johnny on the spot.

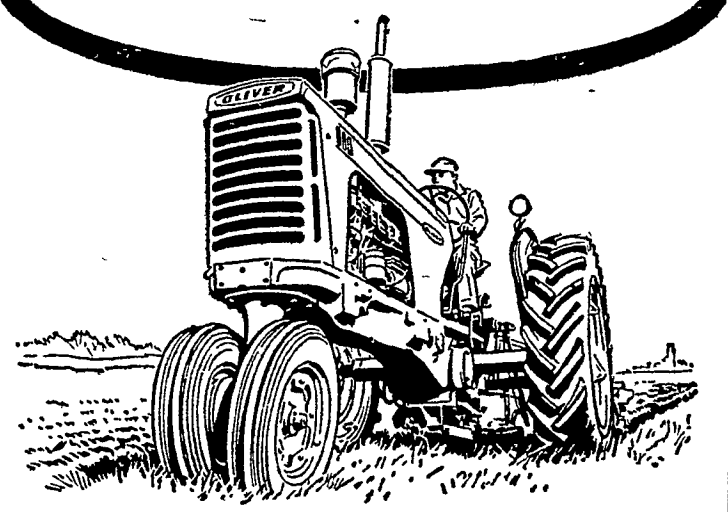
Here's Really BIG Row Crop Power

4-5 Plow OLIVER 880



This is it! All the power you want in a row crop tractor—well over 50 h.p. on the drawbar, delivered by a big, smooth, higher speed 6-cylinder engine.

And a new way to speed up heavy draft jobs! Now, Oliver gives you 12 forward speeds with the Power-Booster Drive—almost one-third *more pull* on the go at the touch of a lever.

But, there's still another way to utilize the full power of your 880: add Oliver's new Power-Traction Hitch. In plowing, for example, it transfers weight to the rear wheels, keeps you going in the tough spots. Then, there's Powerjuster wheels and power steering—sure ways to ease your working day.

There's only one way to see all that's *new* in the 880. Stop in soon. Try it, too—*feel* the power of this big, new Oliver.

Holstein Assn. Claims New Breed Registration Record

The Holstein-Friesian Assn. of America is claiming one of its best years as a breed registry, with 254,867 animals registered in 1958, first time a dairy breed group has passed the quarter-million mark in one year.

At year's end, association spokesmen report, 91,834 cows in 2,405 herds were enrolled in official testing programs.

A sidelight to the year's work is the fact that 1,538 registered Holsteins were sold out of the country, including 1,356 cows and heifers and 182 bulls going to 22 different countries.

Mexico received 930 cows and 59 bulls; Puerto Rico, 123 cows and 30 bulls; Venezuela 107 cows and four bulls; Turkey, 62 females and 17 males; Canada, 30 and 26; Colombia, 30 and four; Dominica, 42 females and Japan, four of each.

The assn. also announced new milking records for five area Holstein herds.

The 25 cow herd of John M. Umble, Atglen, averaged 13,860 lbs. of milk and 510 lbs. of fat on two-milking, 305 day lactation period average.

The eight cow herd of Harvey Rettew, Manheim, averaged 13,503 lbs. of milk and 506 lbs. of fat.

The 15 cow herd of Earl L. Umble, Atglen, had a 12,912 lb. of milk and 478 lbs. of fat average.

The 21 cow herd of J. C. and Jay Garber, Lancaster, averaged 12,697 lbs. of milk and 488 lbs. of fat.

The six cow herd of John E. Kreider, Lancaster, averaged 12,482 lbs. of milk and 506 lbs. of fat.

Farm ponds are seldom fished enough for greatest production.

Spaghetti, mainstay of Italian diets, will be especially made from U. S. flour and given to needy families in Italy as gifts from the people of America through CARE Food Crusade

Avoid Sagging Hem — A sagging hem detracts from the best-made dress. To keep the hem in a skirt cut on the bias from sagging, fasten the skirt to a hanger and let it hang 48 hours beore marking the hemline, suggests Miss Thelma Baier, Penn State cothing extension speciaist. With this method the weight of the dress stretches the fabric before you make thehem.

'Sprayer-Duster' Shows Promise in USDA Tests

A versatile sprayer-duster, developed cooperatively in USDA and State research holds promise for use on several low - growing row crops.

Used successfully against aphids on potatoes during the past three years in Oregon and Washington, the sprayer-duster will be tried for applying insecticides to lettuce and broccoli Other row crops to which the machine may be adapted include string and lima beans, egg plant, cabbage, cauliflower, collards, and strawberries.

Tests have demonstrated the flexibility of this machine for either spraying or dusting. It can be adjusted for use on low-growing crops of different row spacings.. Treating booms may be moved horizontally and vertically within rows.

This permits spray nozzles and dust outlets mounted on the booms to be operated at a uniform height above the ground for accurate placement of insecticides on upper and under parts of plants.

Why the combination of sprayer and duster in one machine? For low-volume spraying, a supplemental air blast was needed to further atomize the liquid as it leaves the nozzle. What better source of air blast than a duster? Hence, the decision to build spray nozzles onto a duster.

The double-purpose unit lets farmers apply chemicals wet or dry, depending on what the situation calls for.

With currently used insecticides, the researchers got almost complete control of the aphids without significant mechanical damage to vines.

The unit can be powered by a row-crop tractor or other suitable vehicle. A horizontal tubular drawbar is attached to the vehicle at right angle to the direction of travel.

Sprayer-duster booms are attached to the drawbar by universal joint and rest their weight at the other end on skilike shoes that trail along the ground midway between rows. Thus, atomizing spray nozzles and dust outlets on the booms are at a constant height and distance from the plants.

One set of nozzles mounted within the dust outlets is directed to treat un leaves and near the level in adjacent ro high-velocity air str charging around the picks up the spray, b up to some extent, ces it through and the plants. Another nozzles treats the t sides of the same pl

Consider Use in P parisons — When co prices, go beyond th price and consider ho use the item, advis Helen E. Bell, Pen home management e specialist. A beef ro a small portion of b cost more than a ve one, but may actually for two meals instead And buying a larger of fabric than you an extravagance even the price per yard is
